

**High Throughput Bioanalytical Sample Preparation:
Methods and Automation Strategies**

Written by D.A. Wells, Sample Prep Solutions, St. Paul, Minnesota USA

Published by Elsevier Science, 2003

ISBN 0-444-51029-X Hardbound, 628 pages

Contents

Preface xxv

List of Acronyms xxvii

Chapter 1

Role of Bioanalysis in Pharmaceutical Drug Development

1.1 Overview of the Drug Development Process 1

1.1.1 Introduction 1

1.1.2 Drug Discovery 2

1.1.3 Preclinical Development 4

1.1.4 Clinical Development 6

1.1.4.1 Introduction 6

1.1.4.2 Phase I 6

1.1.4.3 Phase II 7

1.1.4.4 Phase III 8

1.1.4.5 New Drug Application (NDA) 9

1.1.5 Manufacturing and Sale 10

1.2 Industry Trends 12

1.2.1 Introduction 12

1.2.2 Combinatorial Chemistry 13

1.2.3 Automation 15

1.2.4 Analytical Instrumentation—LC-MS 16

1.2.4.1 Introduction 16

1.2.4.2 LC-MS Interface 17

1.2.4.2.1 Electrospray Ionization 17

1.2.4.2.2 Atmospheric Pressure Chemical Ionization	18
1.2.4.3 Mass Analyzers	18
1.2.4.4 Further Reading	20
1.2.5 N-in-1 Dosing	22
1.3 Specific Roles for Bioanalysis in Drug Development	24
1.3.1 Drug Discovery—Lead Optimization	24
1.3.1.1 Screening in vivo for Pharmacokinetic Properties	24
1.3.1.2 Screening in vitro for Pharmacokinetic Properties	24
1.3.1.2.1 Absorption	25
1.3.1.2.2 Metabolic Stability Screening	26
1.3.1.2.3 Metabolic Inhibition of Cytochrome P450	28
1.3.1.3 Toxicity Testing	28
1.3.1.4 Further Reading	29
1.3.2 Preclinical—ADME and Metabolite Identification	30
1.3.2.1 ADME Studies	30
1.3.2.2 Metabolite Identification and Characterization	31
1.3.3 Clinical—Pharmacokinetics	32
1.3.4 Therapeutic Drug Monitoring	33
Acknowledgments	34
References	34

Chapter 2

Fundamental Strategies for Bioanalytical Sample Preparation

2.1 Importance of Sample Preparation	41
2.1.1 Introduction	41
2.1.2 Removal of Matrix Components	43
2.1.3 Concentration of Analyte	44
2.1.4 Solvent Exchange	44
2.2 General Techniques for Sample Preparation	44
2.2.1 Introduction	44
2.2.2 Dilution Followed by Injection	46
2.2.3 Protein Precipitation	46
2.2.4 Filtration	47
2.2.5 Protein Removal	47
2.2.6 Liquid-Liquid Extraction	48
2.2.7 Solid-Supported Liquid-Liquid Extraction	49
2.2.8 Solid-Phase Extraction (Off-Line)	49
2.2.9 Solid-Phase Extraction (On-Line)	50
2.2.10 Turbulent Flow Chromatography	51
2.2.11 Restricted Access Media	52

2.2.12 Monolithic Columns.....	53
2.2.13 Immunoaffinity Extraction	53
2.2.14 Combinations of Techniques	54
2.3 Essential Concepts for Sample Preparation	55
2.3.1 Influence of Sample pH on Ionization.....	55
2.3.1.1 Introduction	55
2.3.1.2 Dissociation Behavior of Weak Acids	55
2.3.1.3 Henderson-Hasselbach Equation.....	57
2.3.1.4 Prediction of pKa Values	59
2.3.1.5 Importance of Using Buffers.....	60
2.3.1.6 Further Reading	61
2.3.2 Effects of Anticoagulants and Storage on Clot Formation	61
2.3.3 Evaluation of Matrix Effect	62
2.3.4 Determination of Recovery	63
Acknowledgments	64
References.....	64

Chapter 3

High Throughput Tools for Bioanalysis: Microplates

3.1 Introduction.....	75
3.2 Microplate Fundamentals	77
3.2.1 History	77
3.2.2 Applications.....	78
3.2.3 Specifications	80
3.3 Varieties in Microplate Well Geometry and Plate Surface.....	81
3.3.1 Well Shape and Well Bottom Shape	81
3.3.2 Microplate Surfaces.....	84
3.4 Microplates as Sample Containers and Collection Devices	85
3.4.1 Shallow Well Plates.....	85
3.4.2 Deep Well Plates	86
3.4.3 Vial Inserts and Specialty Material Plates.....	87
3.4.4 Microtubes and Removable Well Plates.....	89
3.5 Historical Development of Flow-Through Microplates.....	91
3.5.1 Evolution from Single Columns to Microplates	91
3.5.2 Early Models and Prototypes of Flow-Through Plates.....	92
3.6 Varieties in Flow-Through Microplates.....	93
3.6.1 Introduction	93
3.6.2 Single Molded Plates with Short Skirts	94
3.6.3 Single Molded Plates with Tall Skirts	96
3.6.4 Modular Plates with Removable Wells	97

3.6.5 Other Formats	99
3.7 Applications for Flow-Through Microplates.....	100
3.7.1 Filtration Plates	100
3.7.2 Solid-Phase Extraction Plates	103
3.7.3 Solid-Supported Liquid-Liquid Extraction Plates	103
3.7.4 Equilibrium Dialysis and Ultrafiltration Plates	104
Acknowledgments	104
References.....	104

Chapter 4

High Throughput Tools for Bioanalysis: Accessory Products

4.1 Multichannel Pipettors for Liquid Handling	107
4.2 Liquid Processing Options for Flow-Through Microplates	109
4.2.1 Vacuum Manifold Systems	109
4.2.2 Centrifugation.....	113
4.2.3 Positive Displacement System.....	114
4.3 Sealing Systems	115
4.3.1 Introduction	115
4.3.2 Adhesive Backed Sheets.....	116
4.3.3 Cap Mats.....	116
4.3.4 Heat Applied Foil and Film Sheets.....	119
4.3.5 Lids	121
4.4 Mixing and Centrifugation of Collection Microplates.....	122
4.4.1 Introduction	122
4.4.2 Mixing of Liquids within Microplate Wells	124
4.4.3 Evaluating Cross-Contamination in Sealed Microplates	125
4.4.4 Centrifugation of Microplates	127
4.5 Solvent Evaporation Systems.....	127
4.5.1 Nitrogen and Heat.....	128
4.5.2 Centrifugal Force, Vacuum and Heat	130
4.6 Microplate Compatible Autosamplers	130
4.7 Additional Accessory Products.....	130
Acknowledgments	132
References.....	133

Chapter 5

Automation Tools and Strategies for Bioanalysis

5.1 Roles for Automation in Bioanalysis	135
5.2 Strategies for Selecting Automation.....	137

5.2.1 Defining How Automation will be Used and Supported.....	137
5.2.2 Defining Performance Needs.....	140
5.2.3 Selecting a Vendor.....	141
5.2.4 Obtaining Customer Referrals.....	142
5.3 Task-Specific Automation.....	144
5.3.1 Introduction.....	144
5.3.2 Dispensing Liquids.....	144
5.3.3 Moving Microplates.....	146
5.3.4 Tube Capping and Uncapping.....	147
5.4 Liquid Handling Workstations.....	148
5.4.1 Introduction.....	148
5.4.2 Semi-Automated Solutions—Single Tip (Probe).....	149
5.4.3 Semi-Automated Solutions—4- or 8-Tips (Probes).....	150
5.4.3.1 MultiPROBE II.....	150
5.4.3.2 Genesis RSP.....	154
5.4.3.3 MICROLAB STAR.....	155
5.4.4 Fully Automated Solutions—4- to 8-Tips (Probes).....	155
5.4.4.1 Gripper Integration Platform.....	155
5.4.4.2 Vacuum Manifold and Software Control.....	156
5.4.4.3 Additional Systems.....	158
5.4.4.3.1 Gilson SPE 215.....	158
5.4.4.3.2 Biomek 2000.....	159
5.4.4.3.3 Speedy.....	160
5.4.4.3.4 Genesis.....	160
5.4.4.3.5 MICROLAB AT Plus 2.....	161
5.4.5 Semi-Automated Solution—96-Tips.....	161
5.4.6 Fully Automated Solutions – 96-Tips.....	163
5.4.6.1 Sciclone ALH.....	163
5.4.6.2 Cyberlab.....	164
5.4.6.3 MICROLAB MPH-96.....	166
5.4.6.4 Tecan Te-MO96.....	166
5.5 Application-Specific Workstations or Systems.....	166
5.5.1 Introduction.....	166
5.5.2 Expanded Capabilities Based on a Workstation.....	167
5.5.3 Custom Configured Capabilities Involving Robotics.....	169
5.6 Strategies for Using Automation in a Bioanalytical Setting.....	172
5.6.1 Introduction.....	172
5.6.2 General Considerations.....	173
5.6.2.1 Allow Automation to Eliminate Manual Pipetting Entirely....	173
5.6.2.2 Consider Modifying an Existing Practice to More Efficiently Utilize Automation.....	173

5.6.2.3 Design Procedures with Flexibility in Mind	174
5.6.2.4 Automation Will Not Improve Poor Extraction Chemistry	174
5.6.2.5 Analyze the Laboratory Workflow Pattern to Maximize Productivity	175
5.6.2.6 Scheduling Concerns.....	175
5.6.3 Performance Verification and Record Keeping.....	175
5.6.3.1 Importance of Implementing a Regular Performance Verification Schedule	175
5.6.3.2 PV Determinations and Procedures.....	176
5.6.3.3 PV Considerations.....	179
5.6.3.4 Instrument Maintenance and Cleaning.....	180
5.6.4 Preparation of Standards and Quality Control Samples	181
5.6.4.1 Using a PyTechnology Robot.....	181
5.6.4.2 Using a Liquid Handling Workstation	182
5.6.5 Sample Pretreatment.....	182
5.6.6. Routine Sample Preparation Procedures	184
5.6.7 Method Development Procedures	186
5.6.8 Using Partial SPE Plates.....	189
5.7 Resources for Further Information.....	189
Acknowledgments	190
References.....	191

Chapter 6

Protein Precipitation: High Throughput Techniques and Strategies for Method Development

6.1 Understanding the Technique.....	199
6.1.1 Fundamental Principles	199
6.1.2 Precipitating Agents	200
6.1.2.1 Acids Used as Precipitating Agents	200
6.1.2.2 Organic Solvents Used as Precipitating Agents	201
6.1.2.3 Quantities of Precipitating Agents	202
6.1.2.4 Other Protein Precipitating Agents.....	203
6.1.3 Procedures and Usage.....	204
6.1.4 Advantages	205
6.1.5 Disadvantages.....	206
6.2 Ionization Issues.....	207
6.2.1 Understanding Matrix Effects	207
6.2.2 Minimizing Matrix Effects	211
6.3 High Throughput PPT Techniques Using Collection Microplates	213
6.3.1 Introduction	213

6.3.2 Procedure.....	213
6.3.3 Accessory Products.....	216
6.3.4 Applications.....	217
6.4 High Throughput PPT Techniques Using Filtration Microplates.	221
6.4.1 Plate Specifications.....	221
6.4.2 Procedure.....	222
6.4.3 Accessory Products.....	226
6.4.4 Applications.....	229
6.4.5 Additional Bioanalytical Uses for Filter Plates	233
6.4.5.1 Sample Filtration	233
6.4.5.2 Eluate Filtration.....	235
6.5 Method Development and Optimization Strategies.....	236
6.5.1 Selecting Precipitation Conditions	236
6.5.2 Method Optimization and Troubleshooting.....	238
6.5.2.1 Efficiency Optimization	238
6.5.2.2 Binding to Protein	240
6.5.2.3 Transfer Problems	240
6.5.2.4 Adsorption Problems.....	241
6.5.2.5 Porosity Problems	241
6.5.2.6 Incomplete Protein Removal.....	242
6.5.2.7 Filter Plugging.....	243
6.6 High Throughput Equilibrium Dialysis and Ultrafiltration.....	243
6.6.1 Introduction	243
6.6.2 Equilibrium Dialysis.....	244
6.6.3 Ultrafiltration.....	246
6.6.4 Applications.....	247
Acknowledgments	249
References.....	249

Chapter 7

Protein Precipitation: Automation Strategies

7.1 Automation of Protein Precipitation in Microplates Using a 96-Tip Workstation.....	255
7.1.1 Strategies	255
7.1.1.1 Introduction	255
7.1.1.2 Identify Tasks and Roles for Automation	256
7.1.1.3 Deck Layout and Labware	257
7.1.1.4 Preparation of the Sample Plate	258
7.1.1.5 Addition and Transfer of Precipitant Solution	258
7.1.1.6 Dilution or Evaporation Followed by Reconstitution	259

7.1.1.7 Throughput Considerations	260
7.1.2 Method Example.....	261
7.1.3 Tips and Tricks	263
7.1.3.1 Using the Polypropylene Tips	263
7.1.3.2 Determining Well Depth for Supernatant Removal	264
7.1.3.3 Using Move Steps to Change Deck Position.....	264
7.1.4 Applications.....	265
7.1.5 Automating Method Development	265
7.2 Automation of Protein Precipitation in Filter Plates Using a 96-Tip Workstation.....	266
7.2.1 Strategies	266
7.2.1.1 Introduction	266
7.2.1.2 Deck Layout and Labware	266
7.2.1.3 Performing the Filtration Procedure.....	267
7.2.2 Applications.....	267
7.3 Automation of Protein Precipitation in Microplates Using a 4-/8-Probe Workstation.....	268
7.3.1 Strategies	268
7.3.1.1 Introduction	268
7.3.1.2 Deck Layout and Labware	268
7.3.1.3 Preparation of the Sample Plate	269
7.3.1.4 Addition and Transfer of Precipitant Solution	269
7.3.2 Applications.....	271
7.4 Automation of Protein Precipitation in Filter Plates Using a 4-/8-Probe Workstation.....	272
7.4.1 Strategies	272
7.4.2 Applications.....	273
7.4.3 Additional Automation Capabilities	274
7.5 Full Robotics Integration with Multiple Task Modules	274
Acknowledgments	275
References.....	275

Chapter 8

Liquid-Liquid Extraction: High Throughput Techniques

8.1 Understanding the Technique.....	277
8.1.1 Fundamental Principles	277
8.1.2 Advantages	280
8.1.3 Disadvantages.....	280
8.1.4 Accessory Products.....	281
8.1.5 Applications.....	281

8.2 High Throughput Techniques Using Collection Microplates	282
8.2.1 Introduction	282
8.2.2 Procedure	284
8.2.2.1 Sample Reformatting.....	284
8.2.2.2 Sample Pretreatment and Sample Plate Preparation	284
8.2.2.3 Organic Solvent Delivery, Mixing and Centrifugation	285
8.2.2.4 Transfer of Organic Layer, Evaporation and Reconstitution ..	285
8.2.2.5 Efficiency and Productivity Considerations.....	285
8.2.3 Accessory Products.....	286
8.2.3.1 Introduction	286
8.2.3.2 Microplates.....	286
8.2.3.3 Sealing Systems.....	287
8.2.4 Tips and Tricks	288
8.2.4.1 Plate Selection	288
8.2.4.2 Pipetting Organic Solvents.....	289
8.2.4.3 Clamping the Extraction Plate Prior to Mixing.....	289
8.2.4.4 Repeating the Extraction	289
8.2.4.5 Conversion from Tubes to Plates	290
8.2.5 Applications.....	290
8.3 High Throughput Solid-Supported Techniques Using Flow-Through Microplates	294
8.3.1 Introduction	294
8.3.2 Procedure	295
8.3.3 Advantages	296
8.3.4 Disadvantages.....	296
8.3.5 Product Configurations.....	297
8.3.5.1 Columns or Cartridges	297
8.3.5.2 Microplates.....	297
8.3.6 Accessory Products.....	299
8.3.6.1 Introduction	299
8.3.6.2 Vacuum Manifold with Collection Plate.....	300
8.3.6.3 Liquid Transfers	300
8.3.7 Tips and Tricks	301
8.3.7.1 Choosing the SS-LLE Plate Format	301
8.3.7.2 Securing the Collection Plate	301
8.3.7.3 Exhaustive Elution	301
8.3.8 Applications.....	302
Acknowledgments	304
References.....	304

Chapter 9

Liquid-Liquid Extraction: Strategies for Method Development and Optimization

9.1 Extraction Chemistry: Importance of Sample pH.....	307
9.1.1 Understanding the Influence of Ionization on the Partitioning Process.....	307
9.1.2 Further Manipulation of Sample pH via Back Extraction.....	309
9.1.3 Assisting the Extraction of Hydrophilic Analytes.....	311
9.2 Organic Solvent Selection: Influence of Polarity, Volatility, Selectivity and Density.....	311
9.2.1 Solvent Polarity.....	311
9.2.2 Solvent Volatility.....	313
9.2.3 Solvent Selectivity.....	313
9.2.3.1 Relative Characteristics.....	313
9.2.3.2 Solvent Mixtures.....	314
9.2.4 Solvent Density.....	315
9.3 Rapid Method Development Strategies.....	315
9.3.1 Solvent Screening Experiment.....	315
9.3.2 Tips and Tricks.....	319
9.4 Method Optimization and Troubleshooting.....	319
9.4.1 Introduction.....	319
9.4.2 Choice of Organic Solvent or Solvent Combinations.....	319
9.4.3 Sample pH Adjustment.....	321
9.4.4 Volume of Organic Solvent.....	322
9.4.5 Mixing Mode and Time.....	323
9.4.6 Cleanliness of Extracts after Dry-Down and Reconstitution.....	323
9.4.7 Analyte Volatility on Evaporation.....	324
Acknowledgments.....	326
References.....	326

Chapter 10

Liquid-Liquid Extraction: Automation Strategies

10.1 Automation of LLE Using Phase Boundary Sensing.....	327
10.2 Automation of LLE Using a 96-Tip Workstation.....	330
10.2.1 Strategies.....	330
10.2.1.1 Introduction.....	330
10.2.1.2 Identify Tasks and Roles for Automation.....	331
10.2.1.3 Plan the Deck Layout.....	332
10.2.1.4 Preparation of the Sample Plate.....	332
10.2.1.5 Addition and Transfer of Organic Solvent.....	332

10.2.1.6 Evaporation and Reconstitution	333
10.2.1.7 Throughput Considerations	333
10.2.2 Method Example.....	335
10.2.3 Tips and Tricks	338
10.2.3.1 Containing the Solvent Vapors.....	338
10.2.3.2 Using the Polypropylene Tips	338
10.2.3.3 Centrifuging the Microplate	339
10.2.3.4 Piercing the Plate Seal for Solvent Removal.....	339
10.2.3.5 Determining Well Depth for Organic Solvent Removal	340
10.2.3.6 Using Move Steps to Change Deck Position.....	340
10.2.4 Applications.....	340
10.2.5 Automating Method Development Using a 96-Tip Workstation	343
10.3 Automation of Solid-Supported LLE Using a 96-Tip Workstation.....	344
10.3.1 Strategies	344
10.3.1.1 Introduction	344
10.3.1.2 Identify Tasks and Roles for Automation	345
10.3.1.3 Plan the Deck Layout	345
10.3.1.4 Preparation of the Sample Plate	345
10.3.1.5 Sample Loading.....	346
10.3.1.6 Addition of Organic Solvent	346
10.3.1.7 Evaporation and Reconstitution	347
10.3.1.8 Throughput Considerations	347
10.3.2 Method Example.....	347
10.3.3 Hardware Issues.....	349
10.3.3.1 Configuring the Vacuum Manifold	349
10.3.3.2 Working with SS-LLE Plates that are too tall	351
10.3.4 Tips and Tricks	351
10.3.4.1 Quick Review	351
10.3.4.2 Exhaustive Elution	352
10.3.5 Applications.....	352
10.4 Automation of LLE Using a 4-/8-Probe Workstation.....	353
10.4.1 Introduction	353
10.4.2 Identify Tasks and Roles for Automation.....	353
10.4.3 Deck Layout	354
10.4.4 Preparation of the Sample Tubes.....	355
10.4.5 Elimination of Capping/Uncapping Tubes Using Septum Piercing.....	355
10.4.6 Addition and Transfer of Organic Solvent	356
10.4.7 Evaporation and Reconstitution.....	357
10.4.8 Throughput Considerations	357

Acknowledgments	359
References.....	359

Chapter 11

Solid-Phase Extraction: High Throughput Techniques

11.1 Understanding the Technique.....	361
11.1.1 Fundamental Principles	361
11.1.2 Advantages	364
11.1.3 Disadvantages.....	365
11.2 Sorbent Chemistries and Attraction Mechanisms	366
11.2.1 Nature of the Sorbent Particle	366
11.2.1.1 Silica Sorbents.....	366
11.2.1.2 Polymer Sorbents	369
11.2.1.3 Additional Sorbent Varieties	373
11.2.1.3.1 Dual-Zone	373
11.2.1.3.2 Phenylboronic Acid.....	374
11.2.1.3.3 Graphitized Carbon	374
11.2.1.3.4 Silicalite	375
11.2.1.3.5 Diatomaceous Earth	375
11.2.1.3.6 Molecularly Imprinted Polymers	375
11.2.2 Attraction Mechanisms.....	375
11.2.2.1 Introduction	375
11.2.2.2 Reversed Phase.....	376
11.2.2.3 Ion Exchange.....	377
11.2.2.4 Mixed Mode	378
11.2.2.5 Normal Phase	381
11.2.3 Further Reading	381
11.3 Solid-Phase Extraction Protocols	383
11.3.1 Introduction	383
11.3.2 Simple Reversed Phase (Polymer).....	384
11.3.3 Reversed Phase (Bonded Silica).....	384
11.3.4 Reversed Phase with Primary Silanol Interactions (Bonded Silica).....	386
11.3.5 Mixed Mode	388
11.3.5.1 Introduction	388
11.3.5.2 Mixed Mode Cation Exchange of a Basic Analyte	388
11.3.5.3 Mixed Mode Anion Exchange of an Acidic Analyte	390
11.3.6 Traditional Ion Exchange	391
11.3.7 Normal Phase.....	393
11.4 Sorbent Presentation and Product Formats.....	394

11.4.1 Introduction	394
11.4.2 Packed Particle Beds	395
11.4.3 Disks	396
11.4.3.1 Introduction	396
11.4.3.2 Laminar and Sintered Disks	397
11.4.3.3 Glass Fiber Disks	398
11.4.3.4 PTFE Particle-Loaded Membranes (Disks).....	399
11.4.4 Plate Configurations	401
11.4.4.1 Introduction	401
11.4.4.2 Single Piece Molded Plates	401
11.4.4.3 Modular Plates with Removable Wells	401
11.4.5 Accessory Products.....	405
11.4.6 Liquid Processing: Packed Particle Beds vs. PTFE Disks.....	406
11.5 High Throughput Applications for 96-Well SPE	407
11.5.1 Early Reports	407
11.5.1.1 Introduction	407
11.5.1.2 First Published Application—Manual.....	407
11.5.1.3 First Published Applications—Automated.....	408
11.5.1.4 Reduced Sorbent Mass Plates.....	408
11.5.1.5 High Throughput Using a 96-Tip Workstation	409
11.5.1.6 Optimization of Disk Plate Usage with Workstation	409
11.5.2 Applications using Polymer Sorbents.....	412
11.5.3 Processing Options and Throughput Considerations.....	413
11.5.4 SPE of <i>in vitro</i> Incubation Media	418
11.5.5 Comparisons with Other Sample Preparation Techniques	419
Acknowledgments	421
References.....	421

Chapter 12

Solid-Phase Extraction: Strategies for Method Development and Optimization

12.1 Method Development Objectives.....	433
12.1.1 Introduction	433
12.1.2 Defining the Scope of the Project.....	434
12.2 Generic Approach to Method Development.....	435
12.2.1 Single Sorbent in a Universal Method.....	435
12.2.1.1. Polymer as a Generic Sorbent	435
12.2.1.1.1 Overall Objectives.....	435
12.2.1.1.2 Comments on the Sample Load and Wash Steps.....	437
12.2.1.1.3 Importance of pH Modification for Elution	438

12.2.1.1.4 Suggested Method Development Scheme Using a Polymer.....	440
12.2.1.2 Mixed Mode as a Generic Sorbent	441
12.2.2 Multiple Sorbents within a Method Development Plate.....	443
12.2.2.1 Considerations in Plate Configuration and Usage.....	443
12.2.2.2 Empirical Determination of Optimal Sorbent Chemistries ...	445
12.3 Selective and Rapid Approach to Method Development.....	447
12.3.1 Single Sorbent and Bed Mass Evaluation—Strategy and Procedures	447
12.3.1.1 Overall Strategy.....	447
12.3.1.2 Selection of Sorbent, Format and Bed Mass	449
12.3.1.3 Experiment #1: Load/Elute Screening.....	449
12.3.1.4 Experiment #2: Wash Solvent Optimization	453
12.3.1.5 Experiment #3: Elution Volume Optimization.....	454
12.3.2 Single Sorbent and Bed Mass Evaluation—Results	457
12.3.2.1 Experiment #1: Load/Elute Screening.....	457
12.3.2.2 Experiment #2: Wash Solvent Optimization	460
12.3.2.3 Experiment #3: Elution Volume Optimization.....	461
12.3.2.3.1 Elution Volume Profile—Multiple Volumes	461
12.3.2.3.2 Elution Volume Profile—Repeated Aliquots of the Same Volume	462
12.3.2.3.3 Eliminating the Evaporation Step	463
12.3.2.4 Building Common Scenarios into the Workflow Pattern.....	465
12.3.2.5 Experiments on a Smaller Scale.....	468
12.3.2.6 Use of a Mixed Mode Sorbent	470
12.4 Method Optimization and Troubleshooting.....	471
12.4.1 Introduction	471
12.4.2 Influence of Method Variables on the SPE Process	472
12.4.2.1 Sample Pretreatment	472
12.4.2.2 Sorbent Conditioning	474
12.4.2.3 Sample Load Step	474
12.4.2.4 Wash Step to Remove Interferences	475
12.4.2.5 Incomplete Removal of Liquid from the Sorbent Bed.....	475
12.4.2.6 Incomplete Analyte Elution	476
12.4.2.7 Concentration Step.....	476
12.4.2.8 Reconstitution Step	477
12.4.2.9 Ion Suppression Due to Matrix Effect	478
12.4.2.10 Sorbent Chemistry and Product Format.....	478
12.4.2.11 Summary: Common Reasons for Low Recovery.....	478
12.5 Documentation of the Method Development Process	480
12.6 Further Reading.....	480

Chapter 13
Solid-Phase Extraction: Automation Strategies

13.1 Automation of SPE in Microplates Using a 96-Tip Workstation..... 485

13.1.1 Strategies 485

 13.1.1.1 Introduction 485

 13.1.1.2 Identify Tasks and Role for Automation 486

 13.1.1.3 Plan the Deck Layout 487

 13.1.1.4 Preparation of the Sample Plate 488

 13.1.1.5 Addition of Liquids and Vacuum Processing..... 489

 13.1.1.6 Evaporation and Reconstitution 490

 13.1.1.7 Throughput Considerations 490

13.1.2 Method Example..... 490

13.1.3 Tips and Tricks 493

 13.1.3.1 Containing the Solvent Vapors..... 493

 13.1.3.2 Using the Polypropylene Tips 494

 13.1.3.3 Centrifuging the Extraction Plate after the Final Wash Step. 495

 13.1.3.4 Small Volume Elution 495

 13.1.3.5 Vacuum Manifold Configurations..... 495

 13.1.3.6 Using Move Steps to Change Deck Position..... 495

 13.1.3.7 Practice the Method before Processing Sample Unknowns.. 496

 13.1.3.8 Use a Consistent Strategy for Deck Positions and Stage Height Settings 497

13.1.4 Applications Using a 96-Tip Workstation..... 497

13.1.5 Automating Method Development Using a 96-Tip Workstation 497

13.2 Automation of SPE in Microplates Using a 4-/8-Probe Workstation..... 498

13.2.1 Strategies 498

 13.2.1.1 Introduction 498

 13.2.1.2 Deck Layout and Labware 499

 13.2.1.3 Preparation of the Sample Plate 500

13.2.2 Tips and Tricks 501

 13.2.2.1 Centrifuging the Extraction Plate after the Final Wash Step. 501

 13.2.2.2 Small Volume Elution 501

 13.2.2.3 General Solvent Dispensing 501

 13.2.2.4 Use of Partial SPE Plates..... 502

13.2.3 Applications..... 502

13.2.4 Automating Method Development Using a 4-/8-Probe Workstation	502
13.3 Full Robotics Integration with Multiple Task Modules	503
Acknowledgments	504
References.....	504

Chapter 14

On-Line Sample Preparation: High Throughput Techniques and Strategies for Method Development

14.1 Understanding the Technique.....	506
14.1.1 Introduction	506
14.1.2 Advantages	506
14.1.2.1 Greater Throughput.....	506
14.1.2.2 Fast Turnaround for Method Development and Sample Reanalysis.....	507
14.1.2.3 Minimal Sample Loss by Reducing Nonspecific Adsorption.....	507
14.1.2.4 Little Investment in Additional Hardware.....	507
14.1.3 Disadvantages.....	508
14.1.4 Usage	508
14.2 High Throughput On-Line Sample Preparation Using a Single Column	509
14.2.1 Introduction	509
14.2.2 Turbulent Flow Chromatography (TFC)	509
14.2.2.1 Technology.....	509
14.2.2.2 System Configuration.....	511
14.2.2.3 Procedure.....	511
14.2.2.4 Applications	512
14.2.3 Restricted Access Media (RAM).....	514
14.2.3.1 Technology.....	514
14.2.3.2 Advantages and Disadvantages	516
14.2.3.3 Applications	517
14.2.4 Monolithic Columns	518
14.2.4.1 Technology.....	518
14.2.4.2 Applications	519
14.2.5 Immunoaffinity Extraction (IAE).....	521
14.2.5.1 Technology.....	521
14.2.5.2 Usage.....	521
14.3 High Throughput On-Line Sample Preparation Using Dual Columns.....	522
14.3.1 Configuration.....	522

14.3.2 Advantages	523
14.3.3 Turbulent Flow Chromatography with Column Switching	524
14.3.4 Restricted Access Media with Column Switching	527
14.3.5 Immunoaffinity Extraction with Column Switching	529
14.3.6 Disposable Solid-Phase Extraction Cartridges with Column Switching	530
14.3.6.1 Introduction	530
14.3.6.2 Advantages	530
14.3.6.3 System Hardware and Configuration	531
14.3.6.4 Use with MS Systems for Staggered Parallel SPE and Analysis	532
14.3.6.5 Applications	533
14.3.6.6 Special Related Techniques.....	538
14.3.6.6.1 On-Line SPE Using Traditional 96-Well Microplates....	538
14.3.6.6.2 On-Line SPE Using Membrane Preconcentration Capillary Electrophoresis Mass Spectrometry (mPC-CE-MS)	539
14.4 High Throughput On-Line Sample Preparation Using Multiple Columns	539
14.4.1 Introduction	539
14.4.2 Dual-Column Staggered Extraction Coupled with Single-Column Separation	539
14.4.3 Single-Column Extraction Coupled with Dual-Column Staggered Separation	541
14.4.4 Multiple-Column Extraction Coupled with Multiple-Column Separation	542
14.4.4.1 Conventional Single Interface to Mass Spectrometer	542
14.4.4.2 Indexed Four-Sprayer Electrospray Interface to Mass Spectrometer	543
14.5 Comparisons of On-Line Versus Off-Line and Comparisons Among On-Line Methods.....	546
14.5.1 Introduction	546
14.5.2 Comparisons of On-Line Sample Preparation with Off-Line Sample Preparation.....	546
14.5.2.1 TFC vs. PPT, LLE or SPE.....	546
14.5.2.2 Prospekt vs. PPT, LLE or SPE	547
14.5.2.3 Immunoaffinity vs. SPE	548
14.5.2.4 Time Considerations.....	548
14.5.3 Comparisons Among Different On-Line Sample Preparation Methods	549
14.5.3.1 Introduction	549
14.5.3.2 Single-Column and Dual-Column Turbulent Flow	

Chromatography	549
14.5.3.3 Staggered and Parallel Sample Introduction	550
14.6 Method Development Strategies	550
14.6.1 Introduction	550
14.6.2 Method Development for Turbulent Flow Chromatography	551
14.6.2.1 Selection of Operation Mode	551
14.6.2.2 Selection of Column	551
14.6.2.3 Sample Preparation	552
14.6.2.4 Solvent Selection and Flow Conditions for the On-Line Extraction Process	552
14.6.2.5 Generic Method for the On-Line Extraction of Drugs in Various Biological Matrices.....	553
14.6.3 Method Development for Disposable Solid-Phase Extraction Cartridges	554
14.6.3.1 Selection of Sorbent.....	554
14.6.3.2 Optimization of Extraction Variables	555
14.7 Method Optimization and Troubleshooting	558
14.7.1 Introduction	558
14.7.2 How to Reduce Carryover	558
14.7.3 How to Improve Ruggedness	559
14.7.4 How to Improve Peak Shape	560
14.7.5 How to Achieve a Cleaner Extraction	561
14.7.6 Various Troubleshooting Techniques.....	562
Acknowledgments	562
References.....	562

Chapter 15

Advances in Sample Preparation for Bioanalysis

15.1 Solid-Phase Extraction in a Card Format	575
15.1.1 Introduction	575
15.1.2 SPE Card Specifications and Usage	576
15.1.3 Applications.....	579
15.2 Solid-Phase Extraction in a 384-Well Plate	580
15.2.1 Introduction	580
15.2.2 Applications.....	581
15.2.2.1 Sumatriptan in Human Plasma	581
15.2.2.2 Methotrexate and Metabolite in Human Plasma and Urine ..	582
15.3 Future Directions	583
15.3.1 Molecularly Imprinted Polymers	583
15.3.2 Chip Based Sample Preparation	584
